

# Sustainable Global Comfort

We adopted "Sustainable Global Comfort" as our corporate core values statement at Anatomic Global well before the sustainability movement became vogue. So, in addition to our long term passion for designing supremely comfortable and technologically superior memory foam mattresses, we also uphold a 360° "Green" manufacturing commitment by; developing applications for innovative and sustainable plant-based formulas; by leading the industry in the use of products created using zero-air emissions manufacturing processes; and by applying the most efficient direct-to-store and consumer-direct delivery methods for a reduced carbon footprint. All of us at Anatomic Global wish to thank you for including these environmental considerations as part of your decision to purchase this Ecomfort Mattress product.

## The **Functional** layers of an **Ecomfort Mattress**

### Bamboo MemStretch Cover

This exclusively designed Bamboo and Spandex fabric cover works with the memory foam and anatomic support layers to provide a highly compliant sleep surface. Bamboo is naturally anti-microbial and hypoallergenic.

### Enhanced Anatomic Support Layer

This patent pending enhanced memory foam layer adds lateral elasticity and a fluid feel to the mattress. This produces unique body shape conformation and creates correct posture while you sleep.

### Transition Layer

An extra firm layer of memory foam provides a smooth and gentle transition from the comfort and anatomic layers above to the core support layer below.

### Rigid Base Layer

A super firm environmentally friendly layer provides a flat and square edged base for anchoring the entire mattress construction.

### EcoMemoryFoam Layer

An extreme open cell, bio based memory foam that has 9 times the airflow of traditional memory foam for a cooler night's sleep. EcoMemoryFoam's plushness elevates the mattress' comfort and will improve circulation.

### Bio Foam Core Support Layer

A high-density foam support layer engineered to be the perfect foundation for all the memory foam layers to ride on.
